DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species A, as depicted by Figure 2 of the application in the reply filed on October 7, 2005 is acknowledged.

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 15-18, and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 15, line 3, "said said channel" does not make sense.

In claim 17, line 5, "said said channel" does not make sense.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1724

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1, 2, 4, 15, 17, and 18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Fischer et al '526 (Figs. 1, 4, 6, and 7; col. 1, lines 51-56).

With respect to the gutter throttling the liquid, thereby providing a hydrodynamic balance of the liquid being distributed, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In this case, the tapered ends (71', 76' of Fig. 7) provide the apparatus with the capability of throttling the liquid, dependent upon the amount of liquid flowing on the surfaces of areal guide means (6) of the reference.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer et al '526.

Fischer et al '526 as applied above substantially disclose applicant's invention as recited by instant claim 13, except for the specific spacing of the apertures in the channels and the intended flow rate of the liquid therethrough. It is noted that the flow

Art Unit: 1724

rate of the liquid is not a structural limitation and therefore is not given patentable weight within the apparatus claims. With respect to the spacing of the apertures in the channel, absent an unexpected showing of criticality, it would have been obvious for an artisan at the time of the invention, to provide the apertures of the channels as taught by the reference with a spacing, such as the unremarkable spacing as set forth by applicant's claim 13, such spacing being dictated by the amount of liquid being distributed and the size of the column within which the distributor is used.

Allowable Subject Matter

9. Claims 5-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record fails to disclose or suggest the subject matter of instant claim 5.

10. Claims 16 and 20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Scott Bushey whose telephone number is 571 272-1153. The examiner can normally be reached on M-Th 6:30-5:00.
